## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-75 are rejected under 35 U.S.C. 102(e) as being anticipated by Fattouch, U.S. Patent Publication No. 2003/0078051.

Regarding claims 1-75, Fattouch discloses a method for enhancing wireless communications, said method comprising: measuring in real-time, interference metrics associated with links between a wireless communication node and a plurality of client nodes, and scheduling, based at least in part on said interference metrics, communications between said wireless communication node and said plurality of client nodes to reduce service level variability between said plurality of client nodes (0015-0025, 0075).

Fattouch discloses the use a plurality of channels in adjacent cells/service areas having inherent radiation patterns (figures 1, 4 and 5; 0073, 0074).

Fattouch discloses a downlink/uplink map to establish communications between the wireless node and the plurality of client nodes (0030-0032, 0114-0124).

Art Unit: 2617

Fattouch further discloses measuring instantaneous interference associated with client nodes in the cellular system by using "interactive" devices (0036-0041).

## Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Leung et al, U.S. Patent No. 6,262,980, discloses dynamic resource allocation method and apparatus for broadband services in a wireless communication system.

Kuchibhotla et al, U.S. Patent Pub. No. 2004/0224677, discloses a buffer occupancy used in uplink scheduling for a communication device.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Temica M. Beamer whose telephone number is (571) 272-7797. The examiner can normally be reached on Monday-Thursday (alternate Fridays) 7:30am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Appiah can be reached on (571) 272-7904. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2617

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
